# Decision-Making Process (1 Day)

Our business environment gets more complex every day. Competition, customers, technology and markets are all changing rapidly. With rising levels of uncertainty, organizational complexity and increasing risk, managers and employees are asked to make more decisions in less time than ever.

Organizations, now more than ever need effective decision making processes and disciplined approaches for implementation of those decisions. Whether facing simple or complex situations, managers need to solve the right problem by developing not only quantity but quality of options so they can make intelligent choices to move forward. With so many stakeholders involved in each and every decision, effective group decision tools are needed and the organization needs processes and structure to learn and improve their decision-making skills.

## INTENDED AUDIENCE

Managers and staff of all levels of the organization who have to solve problems and make decisions as part of their work.

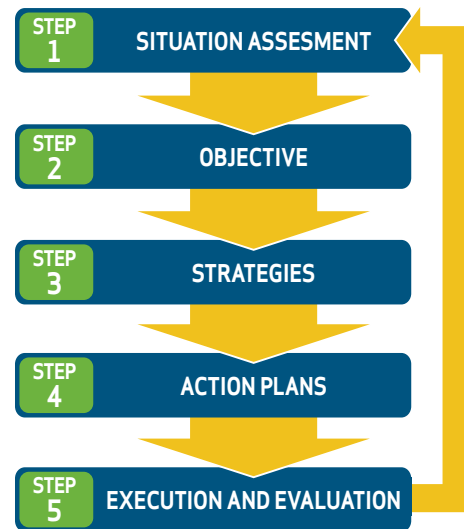

## DURATION

1 day

## WHAT PARTICIPANTS WILL LEARN

The Decision-Making Process is designed to help your organization and everyone in it make high-quality, fact-based decisions. It should be used in every business unit, at all levels, and for both simple and complex situations.

During this highly interactive session, participants will use the Decision-Making Process which is a basic five (5) step process consisting of the following steps:

Using this process will help your organization be more disciplined about making decisions and have a common language around decision making and problem solving.
